

Breakout Session 2

Question 10

Question 10

- Considering LCA model assumptions:
 - How comfortable is your group with modeling assumptions in LCA, especially in light of major differences in impact predictions from different impact indicator models?
 - Should there be an effort for validation of models?
- Should there be an effort for auditing LCA predictions made by a contractor once the job has begun?

Group 8

- Facilitator:
 - T. Van Dam
- Members:
 - L. Wathne
 - S. Kang
 - A. Fraser
 - S. Cliff
 - R. Rosenbaun
 - D. Wu
 - J. Meijer
 - I. Zaabar

Q10

- Generally uncomfortable
- For LCA tools, the decisions made by the tool developers may dictate the outcome
- Sensitivity and uncertainty analysis are LCA tools to deal with assumption comfort level
- With different impact indicator models, there is need to also report life-cycle inventory

- Yes
